**Skills get you
noticed. Projects
get you hired**

**Each agent you build → one
more reason to hire you.**

AI Health Agent

Problem

Medical cases need multiple specialists, creating delays and incomplete insights for patients.

Project

This project uses three GPT-5 medical agents analyzing reports collaboratively, combining cardiology, psychology, and pulmonology expertise to deliver integrated findings, improved clarity, and holistic research-focused medical guidance.

Senior GenAI Engineer

Smart Farming Assistant

Problem

Farmers struggle with generic chatbots that misunderstand agricultural needs and provide unreliable guidance.

Project

This project uses the OpenAI API to build an intelligent farming chatbot offering personalized, accurate, and context-aware agricultural advice, understanding natural language deeply and supporting farmers with dynamic, meaningful conversations.

Repo:

https://github.com/mohammed97ashraf/LLM_Agri_Bot

Chandra
Senior GenAI Engineer

Legal Document Review Agent

Problem

EU legal documents are lengthy, complex, and difficult to interpret without specialized regulatory knowledge.

Project

This project builds a RAG-based Legal AI assistant retrieving, interpreting, and summarizing regulatory documents using ChatGPT-4.0, ChromaDB, and LangChain, enabling clear insights and scalable analysis for complex legal content.

Repo:

<https://github.com/firica/legalai>

Chandra
Senior GenAI Engineer

Virtual Travel Agent

Problem

Travel planning is overwhelming due to scattered information and unreliable chatbots lacking memory.

Project

This project uses LangGraph to create a stateful AI travel agent organizing flights, hotels, and emails while retaining context, automating tasks, supporting tool usage, and providing smooth, personalized planning experiences.

<https://github.com/nirbar1985/ai-travel-agent>

Chandra
Senior GenAI Engineer

AI Crew Agent

Problem

Recruiters spend excessive time screening candidates, causing delays and inconsistent evaluation quality.

Project

This project uses specialized AI recruitment agents to screen resumes, analyze candidates, match requirements, automate workflows, and provide consistent insights, improving hiring efficiency and supporting data-driven decision-making for recruiters.

Repo:

<https://github.com/crewAIInc/crewAI-examples/tree/main/crews/recruitment>

Chandra
Senior GenAI Engineer

Voice Agent using Whisper

Problem

Voice interactions fail due to poor transcription accuracy and limited conversational understanding.

Project

This project integrates Whisper for precise speech recognition with an intelligent LLM agent, converting voice to text, understanding context, and generating natural responses to deliver smooth, hands-free conversational experiences.

Repo:

https://microsoft.github.io/autogen/0.2/docs/notebooks/agent_chat_video_transcript_translate_with_whisper/

Chandra
Senior GenAI Engineer

Web Crawling with Spider API

Problem

Manually exploring websites is slow, inconsistent, and often misses important deep or dynamic pages.

Project

This project uses the Spider API to fully crawl domains, discover pages, extract structured content, map website architecture, and support indexing, analysis, and large-scale data processing with reliable automated crawling.

Repo:

https://microsoft.github.io/autogen/0.2/docs/notebooks/agent_chat_webcrawling_with_spider/

Chandra
Senior GenAI Engineer

Cost Calculation Agent

Problem

LLM usage becomes costly without clear token tracking or transparent expense estimation tools.

Project

This project introduces utilities that analyze prompts, calculate token usage, estimate expenses, present clear cost reports, and help users optimize prompt strategies for predictable, efficient, and controlled LLM budgeting.

Repo:

https://github.com/microsoft/autogen/blob/0.2/notebook/agentchat_cost_token_tracking.ipynb

Chandra
Senior GenAI Engineer

Finance Agent

Problem

Investors struggle to track market movements, analyze companies, and interpret scattered financial data.

Project

This project provides an AI-powered market analyst delivering real-time insights, recommendations, trend analysis, and detailed company evaluations for stocks like AAPL, TSLA, and NVDA, supporting informed, fast, and reliable investment decisions.

Repo:

https://github.com/microsoft/autogen/blob/0.2/notebook/agentchat_cost_token_tracking.ipynb

Chandra
Senior GenAI Engineer

Customer Support Agent

Problem

Businesses struggle to handle large volumes of customer queries consistently and efficiently.

Project

This project builds a LangGraph-based support agent that understands inquiries, automates responses, maintains context, delivers solutions, and ensures fast, accurate, scalable customer assistance across various scenarios and support channels.

Repo:

<https://github.com/langchain-ai/langgraph/blob/main/docs/docs/tutorials/customer-support/customer-support.ipynb>
